PROFESSIONAL SUMMARY

AWS Cloud & DevOps Engineer with 3.5+ years of experience supporting AWS cloud infrastructure, Linux systems, and production operations, with hands-on exposure to CI/CD pipeline automation. Skilled in provisioning and managing core AWS services (EC2, VPC, IAM, S3, Route 53, ALB, Auto Scaling, CloudWatch, CloudTrail), building Jenkins-based CI/CD pipelines integrated with GitHub, and working with Docker, Kubernetes/EKS and Terraform for containerized deployments and Infrastructure as Code. Experienced in monitoring and observability (CloudWatch, Splunk, Prometheus, Grafana), incident and change management via ServiceNow, and SLA-driven production support. AWS Certified Solutions Architect – Associate and AWS Certified Cloud Practitioner.

TECHNICAL SKILLS

Cloud (AWS): EC2, VPC, IAM, S3, Route 53, Application Load Balancer (ALB), Auto Scaling, CloudWatch, CloudTrail, EKS

CI/CD & Version Control: Jenkins (declarative pipelines, GitHub integration, webhook/polling triggers, credentials, agents), GitHub Actions, Git & GitHub (feature branches, pull requests)

Containers & Orchestration: Docker (image build, tagging, registry workflows), Amazon ECR, Kubernetes/EKS (deployments, manifests, kubectl)

Infrastructure as Code: Terraform — modules, variables, outputs, remote state (S3 backend), DynamoDB state locking

Monitoring & Observability: CloudWatch, CloudTrail, Splunk, Prometheus, Grafana

Linux & Scripting: Linux administration, Shell/Bash scripting, SSH, process & service management, log analysis

Networking: TCP/IP, DNS, HTTP/HTTPS, Subnets, Route Tables, Security Groups, NACLs, Load Balancing

IT Operations: ServiceNow, Incident Management, Change Management, Problem Management, SLA-based Production Support (ITIL-aligned)

PROFESSIONAL EXPERIENCE

Senior System Engineer

Dec 2022 – Present

Infosys Ltd, Pune, Maharashtra

- Built and maintained Jenkins CI/CD pipelines using declarative syntax, GitHub integration, webhook/polling triggers, credential management and Jenkins agents.
- Supported GitHub Actions workflows for CI/CD automation, including workflow configuration and pipeline execution.
- Worked with Docker for containerized application workflows — image creation, tagging, registry operations and troubleshooting.
- Deployed and operated containerized applications on Kubernetes and AWS EKS, including manifests and kubectl-based operations.
- Assisted with Terraform-based Infrastructure as Code for AWS resource provisioning, including modules, variables, outputs, remote state and state-locking concepts.
- Managed AWS infrastructure across production and non-production environments: EC2, VPC, S3, IAM, ALB, Auto Scaling, CloudWatch and CloudTrail.
- Provisioned and configured EC2 instances per application requirements, including AMI selection, subnet placement, security groups and connectivity validation.
- Managed EC2 capacity planning, scaling, upgrades and decommissioning through approved change requests and operational procedures.
- Supported VPC networking, subnets, route tables, security groups and ALB configuration, troubleshooting connectivity, access and availability issues.
- Monitored AWS environments using CloudWatch and Splunk, investigating resource utilization, alerts and logs; used CloudTrail for AWS activity auditing.

- Used Prometheus and Grafana for infrastructure and application monitoring, metrics visualization and dashboard-based analysis.
- Handled Linux and AWS infrastructure incidents through ServiceNow, troubleshooting SSH access, disk usage, processes, logs, ports and DNS issues within defined SLAs.
- Supported production deployments, incidents, changes and escalations, coordinating with application, database, network and infrastructure teams.
- Developed Shell scripts for Linux health checks, service monitoring, log analysis and routine operational tasks.

PERSONAL PROJECTS

CI/CD Pipeline using Jenkins, Docker, Amazon ECR & AWS EKS

- Built a declarative Jenkins CI/CD pipeline integrated with GitHub for automated application build and deployment.
- Automated Docker image creation, tagging and publishing to Amazon ECR through Jenkins.
- Deployed containerized applications to AWS EKS using Kubernetes manifests and kubectl.

AWS Infrastructure Automation using Terraform & GitHub Actions

- Built modular Terraform infrastructure covering VPC, EC2, ALB, Auto Scaling, IAM, CloudWatch and RDS.
- Configured Amazon S3 remote state and DynamoDB state locking for Terraform state management.
- Automated Terraform format, validation, plan and provisioning workflows using GitHub Actions.

AWS Auto Scaling & Load-Balanced Infrastructure

- Built scalable AWS infrastructure using EC2, Auto Scaling Groups and Application Load Balancer.
- Configured CPU-based scaling policies and CloudWatch alarms for infrastructure monitoring.
- Configured SNS notifications for AWS infrastructure alerts.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Cloud Practitioner
- ITIL Foundation
- Introduction to DevOps and Site Reliability Engineering (LFS162x)

EDUCATION

Bachelor of Engineering – Chemical Engineering

Savitribai Phule Pune University | June 2022
